EDUCATION

New York Institute of Technology, Manhattan, NY
Bachelor of Science In Computer Science

Anticipated Graduation May 2026

Relevant Courses: Design and Algorithm, Computer Networks, Artificial Intelligence, Adv Network Security

WORK EXPERIENCE

Queens Library - Tech Mentor

Queens, NY (May 2025- Present)

- Managed and maintained all tech resources, including 20 laptops and 15 iPads for the Teen Center, ensuring devices were fully operational and accessible.
- Developed and led web development and coding sessions for teens

Outlier - Freelance AI Quality Analyst

Remote (October 2024-February 2025)

- Designed **25+ AI test prompts**, identifying failure points that **improved model accuracy by 20%**.
- Refined AI responses, enhancing adaptability and robustness.

Mouse Squad - Tech Support

Brooklyn, NY (September 2021- May 2022)

- Diagnosed and resolved **technical issues**, improving system efficiency and reducing downtime by **30%**.
- Managed **hardware/software inventory** to ensure staff had access to necessary tech resources.

Additional Experience: *Assistant Teacher, Summer Youth Program | Ridgewood, NY* — Supported faculty in integrating educational technology and enhancing classroom efficiency.

PROJECTS

AI-Powered Malware Detection App (React Native, TF Lite, Firebase & Python)

- Developed a mobile security application that detects malware in Android apps using an on-device neural network.
- Implemented offline AI scanning, cloud-based verification, and model updates while delivering a polished user interface and smooth end-to-end app functionality.
- Created a personal agent workflow that will assist users in scanning malware as well as giving information

Local Event & Hangout App (Python, React Native)

- Led a 5-member development team to deliver a full-featured event platform, contributing to UI design, authentication, and performance testing.
- Assisted in system evaluation and feature rollout, ensuring smooth functionality across admin, user, and event management modules.

Facial-Recognition Software (Python)

- Built a facial recognition system using Python and OpenCV, allowing for real-time face detection with high accuracy
- Reduced manual attendance processing speed by creating a fully automated pipeline from face capture for identity verification

Skills

Languages and Software: Java, Python, React, HTML, Jira, Google Suite, Figma, Supabase, Firebase

AI & Data: AI Quality Analysis, Prompt Engineering

Languages: English, Nepali, Hindi
